

## Exploring Proportional Relationships: *The Case of Mr. Donnelly*

1 Mr. Donnelly wanted his students to understand that quantities that are in a proportional  
2 (multiplicative) relationship grow at a constant rate and that there were three key strategies that  
3 could be used to solve problems of this type – scaling up, scale factor, and unit rate. He selected  
4 the Candy Jar task for the lesson since it was aligned with his goals, was cognitively challenging,  
5 and had multiple entry points.

6 A candy jar contains 5 Jolly Ranchers (JRs) and 13 Jawbreakers (JBs). Suppose you had a new  
7 candy jar with the same ratio of Jolly Ranchers to Jawbreakers, but it contained 100 Jolly  
8 Ranchers. How many Jawbreakers would you have? Explain how you know.

9  
10 As students began working with their partners on the task, Mr. Donnelly walked around the room  
11 stopping at different groups to listen in on their conversations and to ask questions as needed  
12 (e.g., How did you get that? How do you know that the new ratio is equivalent to the initial ratio?).  
13 When students struggled to figure out what to do he encouraged them to look at the work they  
14 had done the previous day that included producing a table of ratios equivalent to 5 JRs: 13 JBs  
15 and a unit rate of 1 JR to 2.6 JBs. He also encouraged students to consider how much bigger the  
16 new candy jar must be when compared to the original jar.

17  
18 As he made his way around the room Mr. Donnelly also made note of the strategies students  
19 were using (see reverse side) so he could decide which groups he wanted to have present their  
20 work. After visiting each group, he decided that he would ask Groups 4, 5, and 2 to share their  
21 approaches (in this order) since each of these groups used one of the strategies he was targeting  
22 and the sequencing reflected the sophistication and frequency of strategies.

23  
24 During the discussion he asked the presenters (one student from each of the targeted groups) to  
25 explain what their group did and why and he invited other students to consider whether the  
26 approach made sense and to ask questions. He made a point of labeling each of the three  
27 strategies, asking students which strategy was most efficient in solving this particular task, and  
28 asking students questions that helped them make connections between the different strategies  
29 and to the key ideas he was targeting. Specifically he wanted students to see that that the scale  
30 factor identified by Group 5 was the same as the number of entries in the table created by Group  
31 4 (or the number of small candy jars that it would take to make the new candy jar) and that the  
32 unit rate identified by Group 2 was the factor that connected the JRs and JBs in each row of the  
33 table.

34  
35 Below is an excerpt from the discussion that took place around the unit rate solution that was  
36 presented by Jerry from Group 2.

37  
38 Jerry: We figured that there was 1 JR for 2.6 JBs so that a jar with 100 JRs would have 260  
39 JBs. So we got the same thing as the other groups.  
40 Mr. D.: Can you tell us how you figured out that there was 1 JR for 2.6 JBs?  
41 Jerry: We divided 13 by 5.  
42 Mr. D.: Does anyone have any questions for Jerry? (pause) Danielle?  
43 Danielle: How did you know to do  $13 \div 5$ ?  
44 Jerry: See we wanted to find out the number of JBs for 1 JR. So if we wanted JRs to be 1,  
45 we needed to divide it by 5. So now we needed to do the same thing to the JBs.  
46 Danielle: So how did you then get 260 JBs?  
47 Jerry: Well once we had 1 JR to 2.6 JBs it was easy to see that we needed to multiply each  
48 type of candy by 100 so we could get 100 JRs.

49 Mr. D.: So Jerry's group multiplied by 100 but Danielle and her group (Group 5) multiplied by  
50 20. Can they both be right? Amanda?

51 Amanda: Yes. Jerry's group multiplied 1 and 2.6 by 100 and Danielle and her group multiplied  
52 5 and 13 by 20. Jerry's group multiplied by a number 5 times bigger than Danielle's  
53 group because their ratio was 1/5 the size of the ratio Danielle's group used. So it is  
54 the same thing.

55 Mr. D.: Do others agree with what Danielle is saying? (*Students are nodding their heads and  
56 giving Danielle a thumbs up.*) So what is important here is that both groups kept the  
57 ratio constant by multiplying both the JRs and JBs by the same amount. We call what  
58 Jerry and his group found the **unit rate**. A unit rate describes how many units of one  
59 quantity (in this case JBs) correspond to one unit of another quantity (in this case  
60 JRs). (*Mr. Donnelly writes this definition on the board.*)

61 Mr. D.: I am wondering if we can relate the unit rate to the table that Group 4 shared. Take 2  
62 minutes and talk to your partner about this. (*2 minutes pass*)

63 Mr. D.: Kamiko and Jerilyn (from Group 4), can you tell us what you were talking about?

64 Kamiko: We noticed that if we looked at any row in our table that the number of JBs in the row  
65 was always 2.6 times the number of JRs in the same row.

66 Mike: Yeah we saw that too. So it looks like any number of JRs times 2.6 will give you the  
67 number of JBs.

68 Mr. D.: So what if we were looking for the number of JBs in a jar that had 1000 JRs?

69 Mike: Well the new jar would be 1000 times bigger so you multiply by 1000.

70 Mr. D.: So take 2 minutes and see if you and your partner can write a rule that we could use  
71 to find the number of JBs in a candy jar no matter how many JRs are in it.  
72 (*After 2 minutes the discussion continues.*)  
73

74 Towards the end of the lesson Mr. Donnelly placed the solution produced by Group 1 on the  
75 document camera and asked students to decide whether or not this was a viable approach to  
76 solving the task and to justify their answer. He told them they would have five minutes to write a  
77 response that he would collect as they exited the room. He thought that this would give him some  
78 insight as to whether or not individual students were coming to understand that ratios needed to  
79 grow at constant rate that was multiplicative not additive.

Group 1 (1 <sup>st</sup> solution) (incorrect additive)	Groups 3 and 5 (scale factor)	Groups 1 (2 <sup>nd</sup> solution), 4 and 7 (scaling up)																	
<p>100 JRs is 95 more than the 5 we started with. So we will need 95 more JBs than the 13 I started with.</p> <p>5 JRs + 95 JRs = 100 JRs  13 JBs + 95 JBs = 108 JBs</p>	<p>You had to multiply the five JRs by 20 to get 100, so you'd also have to multiply the 13 JBs by 20 to get 260.</p> <p>(x20)</p> <p>5 JRs → 100 JRs  13 JBs → 260 JBs</p> <p>(x20)</p>	JR	JB	JR	JB														
		5	13	55	143														
		10	26	60	156														
		15	39	65	169														
		20	52	70	182														
		25	65	75	195														
		30	78	80	208														
		35	91	85	221														
		40	104	90	234														
		45	117	95	247														
		50	130	100	260														
Group 2 (unit rate)	Group 6 (scaling up)																		
<p>Since the ratio is 5 JRs for 13 JBs, we divided 13 by 5 and got 2.6. So that would mean that for every 1 JR there are 2.6 JBs. So then you just multiply 2.6 by 100.</p> <p>(x100)</p> <p>1 JR → 100 JRs  2.6 JB → 260 JBs</p> <p>(x100)</p>	<table border="1"> <tr> <td>JRs</td> <td>5</td> <td>10</td> <td>20</td> <td>40</td> <td>80</td> <td>100</td> </tr> <tr> <td>JBs</td> <td>13</td> <td>26</td> <td>52</td> <td>104</td> <td>208</td> <td>260</td> </tr> </table> <p>We started by doubling both the number of JRs and JBs. But then when we got to 80 JRs we didn't want to double it anymore because we wanted to end up at 100 JRs and doubling 80 would give me too many. So we noticed that if we added 20 JRs: 52 JBs and 80 JRs: 208 JBs we would get 100 JRs: 260 JBs.</p>					JRs	5	10	20	40	80	100	JBs	13	26	52	104	208	260
JRs	5	10	20	40	80	100													
JBs	13	26	52	104	208	260													
Group 8 (scaling up)																			
<p>We drew 100 JRs in groups of 5. Then we put 13 JBs with each group of 5 JRs. We then counted the number of JBs and found we had used 260 of them.</p>
